

Accelerating Product Design

Navigate your CAD/CAM/CAE world

Jeffrey Berger
Fin-el LLC
Indianapolis, Indiana USA

“Designing without the SpaceBall feels like working with one arm cut off.”

Phil Wall, AESSEAL Designer

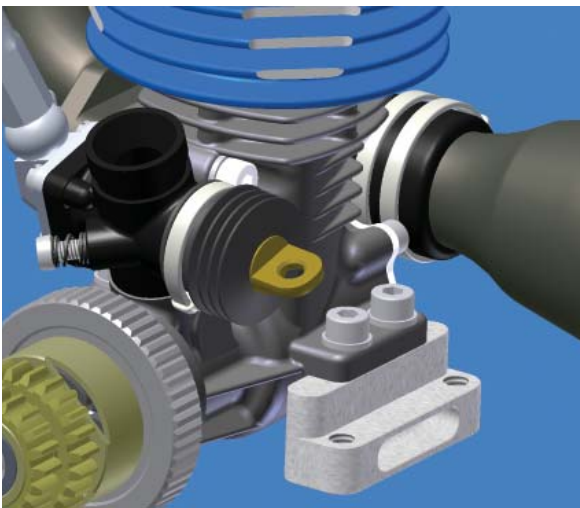

“I’m amazed everyone who works in 3D doesn’t have one of these devices.”

Stephen Wolfe, Publisher, CAD/CAM/Net

“Highly Addictive. Once you try a 3Dconnexion controller, you can’t live without it.”

Elise Moss, former SVAPU president

As a user of high performance 3D software, you know how much you rely on your mouse. All those menus and options require complex series of mouse clicks and trips to the keyboard to move, then edit, objects on the screen. Constantly shifting between navigation and editing activities interrupts the design process, even though you may not be aware of it. Plus, all that clicking puts a great deal of strain on your mouse hand. There is a much better way!

Move Beyond the Mouse

With 3Dconnexion’s family of unparalleled navigation devices (also called “motion controllers”), you can forget the tedious, repetitive motions required when using a mouse alone. Our devices will accelerate your productivity with 6 degrees of newfound freedom. Now you can simultaneously pan, zoom and rotate 3D models with a navigation device while editing with the mouse: at the same time.

Click Less, Accomplish More

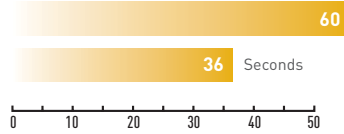

With a navigation device handling all the navigation with the touch of a button or a twist of the device cap, you’ll reduce mouse movements by 50%, and be 30% more productive. And it’s so easy to use, you’ll easily recover your investment on the first job

Accelerating Product Design

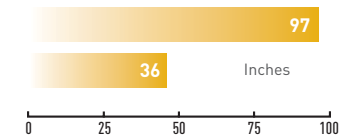

Measurements averaged across 3 leading CAD applications.

Two hands are faster than one

Design Time

Two hands are less fatiguing than one

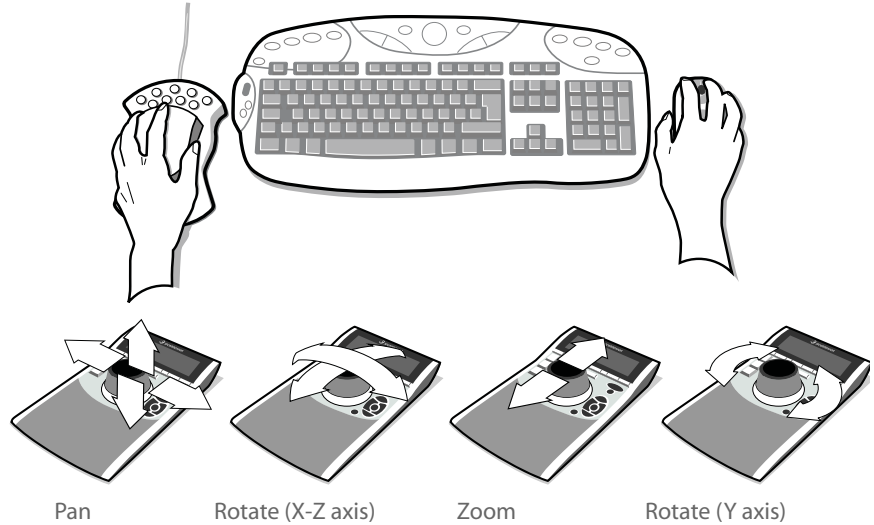

Mouse Movements

An independent study by a leading ergonomics consulting firm concluded:

- Hand motions reduced 64%.
- Average muscle activity 33% less.
- 9 body comfort metrics rated better.
- 90% of the subjects prefer to have a navigation device.

Position with the navigation device & edit with the mouse

Light movements move your model on screen

Streamline Your Entire Workflow

From concept to detailed design to prototype to manufacture, the ability to navigate and create in parallel gets the job done faster, better and with greater accuracy. View your designs from every angle, without clicking the mouse. You'll see potential design flaws sooner. You'll see relationships between complex assembly components more easily. You'll save money by ensuring better form, fit and function throughout the product lifecycle.

Unlock Your Application's True Power

3Dconnexion navigation devices come with software that unlocks special features in all your CAD/CAM/CAE applications: features you simply cannot tap using a mouse alone. Each of our devices features programmable buttons that allow you to capture frequently used command sequences and execute them with a single touch. Imagine how much time that could save.

Take 3D design to a whole new dimension

Over 350,000 users in aerospace, automotive, consumer goods, electronics and machine tools rely on our navigation devices to help them be more productive, creative and competitive. In fact, they refuse to work without them! From start to finish, from design to done, you'll work faster, smarter, and you'll have fun!
