

COMPANY BACKGROUNDER

About Bayco

Bayco has successfully designed and marketed task lighting solutions for more than 20 years. Our task lighting product family has established a leadership position in the traditional incandescent, fluorescent and halogen task lights used by people working in various industrial environments and at home.

Bayco is the established leader in next generation personal task lighting systems incorporating advanced solid-state technology. Our dedicated research and development teams continually seek out solutions for demanding professional lighting applications.

The 110,000 square feet Texas facility is home to Bayco's R & D, marketing, sales and distribution operations. Bayco manages dedicated sales channels and manufacturing from additional offices in the mid-west, northwest and abroad.

Our growing patent portfolio is a cornerstone business asset that clearly demonstrates our emphasis on product innovation and creativity while ensuring our customers the highest quality products.

Company Mission

Bayco's business mission is to provide portable task lighting tools for professionals and non-professionals that make work and play safer through exceptional technical innovation and quality.

We are advocates of light as a fundamental necessity for all living things. In the professional work environment of public safety, military and hazardous industrial environments, necessity is not compromised.

Through the use of advanced LED technology, optics, microprocessors and medical grade nickel metal hydride batteries, Bayco is developing and marketing the next generation in personal task lighting that has become the standard for the most demanding work environments.

Market Vision

Traditional task lighting depends heavily on conventional incandescent, fluorescent and halogen light sources. These light sources have served end users very well in a variety of applications utilizing power cords and conventional batteries.

Our extensive knowledge of corded and rechargeable task lighting solutions allowed our engineers to leap forward toward designs that represent the next generation in task lighting specialized for professional and non-professional use.

We understand the back-of-the-mind concerns of the petroleum plant and oil rig technicians that must work in hazardous, explosion prone environments. We understand the concerns of the public safety and military personnel and the vulnerability of limited illumination. We understand the demands of the industrial technician working long hours in confined and dark places to bring a plant back to full operational capability.

Our vision is for these tireless professionals to have in their personal possession, task lights that compliment their agility, mobility and dedication, by working as hard as they do, all the time, any time.

BAYCO IS THE LEADER IN NEXT GENERATION PERSONAL TASK LIGHTING SOLUTIONS BECAUSE WE BELIEVE:

Life Depends on Light™
